

JH Biotech, Inc.

Innovation for a Greener Earth

WINTER NEWSLETTER 2014

Innovation for a Greener Earth

Since 1987 JH Biotech, Inc. has been manufacturing products with the motto “Biotechnologies For Safer Agriculture”.

In order to update our image JH Biotech has changed its motto to “Innovation for a Greener Earth”. Not only do we manufacture safer products but we also want to reflect our commitment to making greener products to help our earth.

JH Biotech Is Growing – Biology Department

In our effort to create more green and safe products, JH Biotech, Inc. has started a new Biology research department. The staff in this department will develop and test new biologically-based products designed for use in commercial agriculture. This department will be located at the corporate offices in Ventura, CA.

New Product

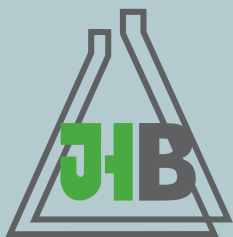

Chameleon is a revolutionary new water acidifier with 3-Step color change indicator. Chameleon is an advance water conditioner and acidifier product designed to correct the pH of water before adding other products to the spray tank. As Chameleon is added to the spray tank the water changes color to indicate the pH range. This convenient color changing feature eliminates the need for pH meters and test strips.

Chameleon is suitable for all vine crops, melons, and vegetables. To correct high pH water add the desired amount of water to spray tank. Add Chameleon to spray tank until desired water pH range is achieved. The color of the solution will indicated the pH range. A blue color indicates the solution is alkaline and has a pH above 7. A green color indicates the pH is between 6 and 7. And a yellow color indicates the solution is acidic with a pH below 6.

When adjusting the pH of spray water growers need to use a pH meter or test strips to see if the pH value has moved into the desired range. This operation can be time consuming and awkward, especially in the field. Chameleon solves this problem by incorporating a three colored pH indicator into the acidifier. Now growers can add Chameleon to acidify their spray solutions and visually see if they are nearing the desired pH range, right in the tank! This new product greatly reduces handling, mess, and preparation time.

Soft Products

JH Biotech, Inc. specializes in “Innovation for a Greener Earth”. JH Biotech does not manufacture any toxic pesticides. In fact, our Fosphite fungicide is categorized as a “Reduced Risk” fungicide by the U.S. Environmental Protection Agency (EPA). We are also the leader in organic products with 28 OMRI listings. Conventional growers can “get softer” by using one or more JH Biotech, Inc. products.
