MILDEW CURE[®]

All natural Fungicide

Mildew Cure is a natural botanical fungicide that provides excellent control of powdery mildew on various crops and ornamentals. **Mildew Cure** is safe, effective, long lasting and suitable for organic food production.

Mildew Cure protects your plants through harvest and is a great tool to use in your garden. It is less harmful to beneficial fauna than most fungicides.

Mildew Cure is a natural product; it combats powdery mildew while offering little chance for disease resistance build-up.

Benefits of Using Mildew Cure

- All Natural & Organic
- Safe Around Children and Pets
- Effectively Controls Fungus
- Never Leaves a Residue or Odd Taste

SAFETY: **Mildew Cure** is derived from cottonseed oil and garlic extracts. These active ingredients are food grade materials. The US EPA has exempted these materials from registration under section 25(b) of FIFRA. There are no residue tolerance limits for any food crops, including fruits and berries.

Mildew Cure has the ability to suppress spider mite populations to some extent which will help preventively control powdery mildew.

Mode of Action

Mildew Cure prevents the entrance of powdery mildew fungi spores into the plant openings by creating a physical barrier. It also prevents the fungi from attaching to the plant tissues for several days after application.

* This flyer is not valid in Oregon.

Mildew Cure is listed with The Organic Materials Review Institute as a Botanical Pesticide for use on food crops. It is also approved under the WSDA Organic Foods Program.

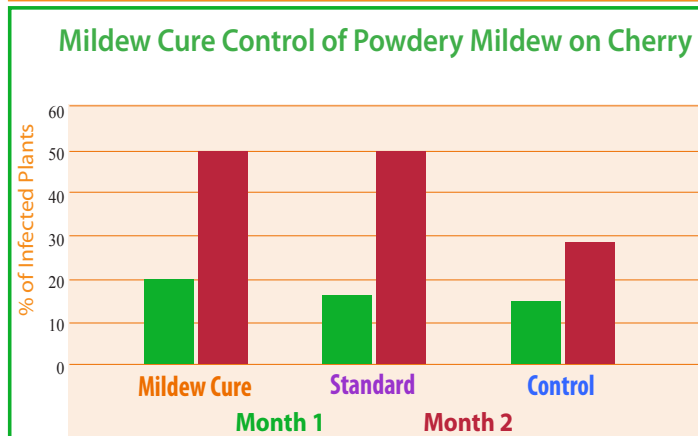

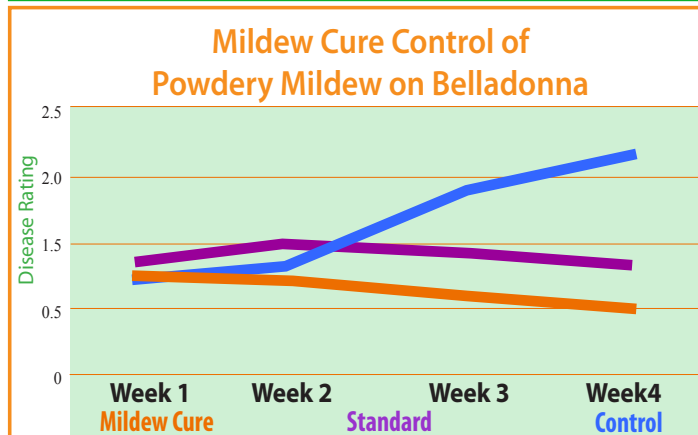

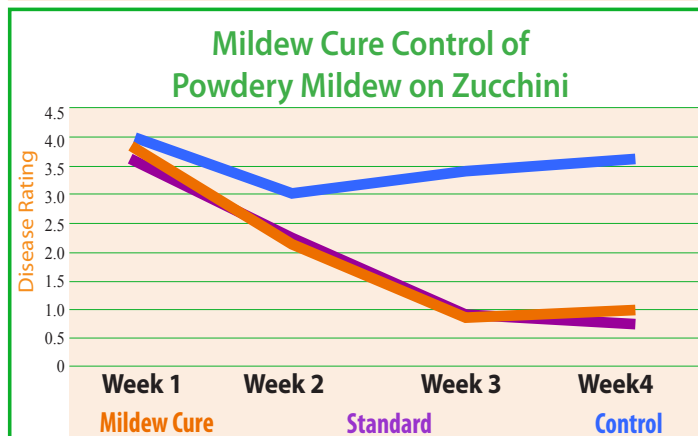

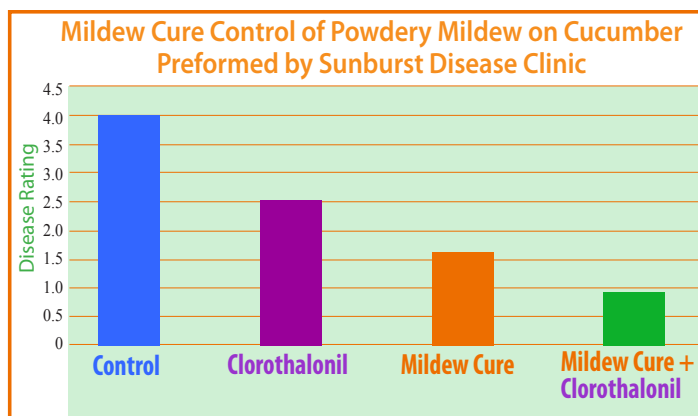

Mildew Cure is a contact fungicide. It controls powdery mildew infestations. Good coverage will improve the product efficacy. **Mildew Cure** gives better control when applied with a spreader such as Natural Wet. **Mildew Cure** works best as a preventative. Apply before disease symptoms appear for best results.

APPLICATION FREQUENCY:

Application of **Mildew Cure** should be repeated according to the disease severity.

PLANT SAFETY:

Mildew Cure shows no phytotoxicity on most plants and does not cause any type of fruit or berry damage when used as instructed. Always conduct a phytotoxicity check before applying to large areas.
