

# JH Biotech

**Figure 1.** The quality of potatoes in this test were determined by size only. Process grade potatoes were less than 1.625 inches in size. Those greater than 1.625 inches in size make chipping grade.

**Figure 2.** The return to the grower is figured by subtracting the suggested retail price plus application costs from the total dollars per acre:

Symspray - \$4.50 application \$5.50 = \$10.00

BioActivate - \$6.25 + application \$5.50 = \$11.75
