

# ENDURANCE™

## Slow-Release Nitrogen

Our **ENDURANCE™** series features liquid, homogeneous solutions formulated with precise NPK ratios. Its chemical composition leaves no residue, enhances consistent growth of turf grasses and ornamentals and provides uniform coloration.

Each product contains slow-release nitrogen sources, supplying nitrogen steadily over time. If Turf and ornamentals experience continuous stress, these solutions can improve recovery rates. With nitrogen levels above 15%, the **ENDURANCE™** series can deliver lasting nitrogen availability and supports even, sustained growth.

Suitable for both cool-season and warm-season turf, the **ENDURANCE™** series extends turf greening without causing excessive flush growth. These solutions blend readily with micronutrients, especially iron, manganese, and zinc, to improve performance.

### Product Profile

**Form:** Liquid

**Function:** Slow-release nitrogen

**Compatibility:** Wide-ranging compatibility\*

**Storage:** Dry, cool, and shaded area

*\* Recommended to perform a compatibility test before application.*

**Made in  
USA**

### Advantages:

- Compatible with all irrigation systems
- Contains slow-release and stabilized nitrogen sources
- Chlorine and sodium-free formulation
- Minimal phytotoxicity risk

### Key Features

- Promotes vigorous leaf and stem growth in ornamental plants.
- Reduces nitrogen loss and extends fertilizer efficiency
- Enhances plant resilience and supports stable growth
- Ideal for all crops with high nitrogen demands

## Recommended Uses

### ENDURANCE™ IRON 6 15-0-0

Turf

Apply 2-6 fl. oz. per 1000 sq. ft. in approximately 3-5 gal. of water. Depending on the type of turf, apply every 2-4 weeks.

### ENDURANCE™ 30-0-0

Ornamental Foliage

Apply 3-6 fl. oz. per 1000 sq. ft. diluted in approximately 2-5 gal. of water. Depending on crop requirements, apply at 7-14 day intervals.
