# CHAMELEON

pH Adjuster with 3-step color change

**Chameleon.** When adjusting the pH of spray water growers need to use a pH meter or test strips to see if the pH value has moved into the desired range. This operation can be time consuming and awkward, especially in the field. Chameleon solves this problem by incorporating a colored pH indicator into product so growers can visually see if they are nearing the desired pH range, right in the tank! This new product greatly reduces handling, mess, and preparation time.

## AGRICULTURAL USE:

To correct high pH water add the desired amount of water to spray tank. Add Chameleon to spray tank until desired pH range is achieved. The color of the solution will indicate the pH range. A blue color indicates the solution is alkaline and has a pH above 7. A green color indicates the pH is between 6 and 7. And a yellow color indicates the solution is acidic and has a pH below 6.

## Benefits of Using Chameleon

- Acidifies spray water
- Convenient color changes identify pH range
- Helps clean and dissolve hard water deposits
