ORCHIDMAX

Complete Orchid Fertilizer

OrchidMax is a complete water soluble fertilizer with micronutrients for all species of orchids. A complete fertilizer is one that has nitrogen, phosphorus, and potassium in the formula. **OrchidMax** has these major fertilizer components as well as added micronutrients. Many orchid fertilizer formulas on the market do not have micronutrients. This lack of micronutrients is not a problem for plants growing in soil because the micronutrients can be pulled from the soil. But, in soilless conditions where most orchids are grown micronutrient deficiencies are often a problem. The micronutrients in **OrchidMax** help avoid these deficiencies. Another advantage to using **OrchidMax** is that it has no urea. Urea is a slow release source of nitrogen. The nitrogen in **OrchidMax** is immediately available nitrogen for fast green up.

APPLICATION GUIDELINES

MIXING INSTRUCTIONS:

Fill mixing tank half full of water then add fertilizer. Agitation is advised to ensure product dissolves in water.

ORCHIDS:

Mix 1 tablespoon (Tbsp) of **OrchidMax** per gallon of water. Reapply every other watering.

Advantages of Using OrchidMax

- Complete formula
- Added micronutrients
- Water soluble formula
- Compatible with most other products
