

JH Biotech, Inc.

Bio-Activate Biostimulant

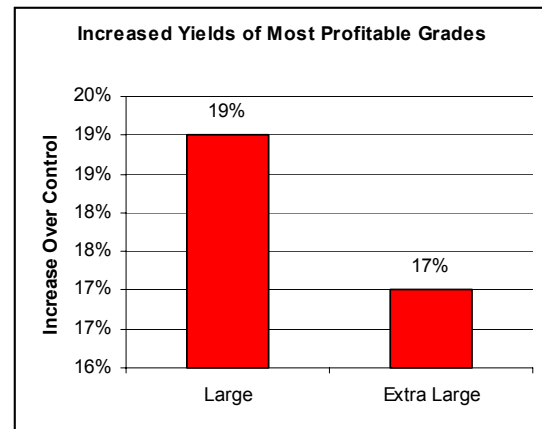

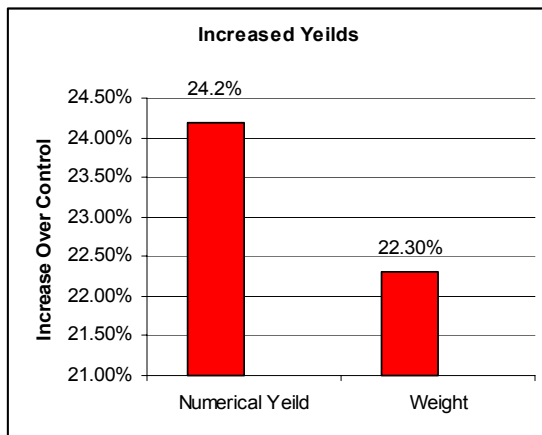

Bio-Activate on Fresh Market Tomatoes

Objective:

This experiment was designed to determine the affect of JH Biotech's Bio-Activate on Fresh Market Tomatoes.

Test Crop: Shady Lady Market Tomatoes
Location: Escalon, CA
Date: 1992
Treatment: Control: Standard Crop Management Program
Treatment: 4 Foliar Applications

Results:

Conclusion:

The addition of JH Biotech's Bio-Activate Biostimulant to an effective crop management program increased the numerical yield, weight yield and increased yield in the most profitable "extra large" fruit size category. Resulted in a 24% increase in gross return.
