

WESTERN FARM SERVICES

TRIAL PLOT 1990

Crop: Sugar Beet
Material: Humic Acid 12%
Rate: ½ gallon
Location: Rupert
Application: 3-28-90

Treatment:

1. JH Biotech, 12% Humic Acid
Rate ½ gallon
2. Check

Material was applied in liquid fertilizer mix as a mark out to sugar beets. All factors were identical with the exception of the humic acid. At harvest test strips were dug in the treated as well as the untreated area of the field. Results were totaled and averaged. The analysis of the fertilizer mix was 26-50-0, 5Zn, 4Mn, 1B, using 9-27-0 and 21-0-0 plus solubor and micronutrients.

Results:

Treatment	Yield
1. Biotech 12% Humic Acid	25.82 T/A
2. Check	24.90 T/A +.92 T/A yield
